Lead-in / 導入資訊

Coronavirus Disease 2019 (COVID-19) first broke out at Wuhan city of China in early December 2019. It has rapidly widespread in almost every country around the world and has become a global public health crisis. The virus was originated in bats in Huanan seafood and animal market in China, infected to humans and transmitted from person to person. Globally, as of 23, December 2022, there have been 651,918,402 confirmed cases of COVID-19, including 6,656,601 deaths, reported by WHO.

2019新型冠狀病毒病 (COVID-19) 於2019年12月初在中國武漢市首次爆發。它已在世界各地的幾乎每個國家迅速傳播，並已成為全球公共衛生危機。該病毒起源於中國華南海鮮及野生動物市場的蝙蝠，感染人類並在人與人之間傳播。全球範圍內，截至2022年12月23日，世界衛生組織 (WHO) 報告了 651,918,402 例確診病例，其中包含 6,656,601 例死亡。

Words You Should Learn / 你應該學習的字詞

Lockdown / 封城 / 封鎖

It means “an emergency situation in which people are not allowed to freely enter, leave, or move around in a building or area because of danger” (Cambridge Dictionary). Aimed at curbing the virus’ spread, countries around the world enforced restrictions of business time and only essential business were allowed to remain open.

它意味著「由於危險，人們不被允許自由進入、離開或在建築物或區域內移動的緊急情況」（《劍橋詞典》）。為了遏制病毒的傳播，世界各國強制限制商業營業時間，僅允許維持基本運作的行業保持開放。

Beginning with the first lockdown in China's Hubei province and nationwide in Italy in March, lockdowns continued to be implemented in many countries throughout 2020 and 2021. The world's longest continuous lockdown lasting 234 days took place in Buenos Aires, Argentina in 2020. As of October 2021, the city of Melbourne, Australia, and certain cities in Peru and Chile spent the most cumulative days in lockdown over separate periods, although measures varied among these countries.

從3月中國湖北省的首次封鎖以及義大利全國範圍內的封鎖開始，封鎖措施在整個2020年和2021年繼續在許多國家實施。2020年，阿根廷布宜諾斯艾利斯發生了世界上持續時間最長的連續封鎖，長達 234 天。截至2021年10月，澳洲墨爾本以及秘魯和智利的某些城市在不同時期實施的封鎖累計天數最多，儘管這些國家的措施各有不同。

School Closure / 學校關閉

The COVID-19 crisis has significantly affected the education sector across all regions. Full and partial school closures have devastating consequences for children’ s learning and wellbeing. The majority of schoolchildren worldwide rely on their schools as a place where they can interact with their peers, seek support, access health and immunization services and a nutritious meal. The longer schools remain closed, the longer children are cut off from these critical elements of childhood.

新冠病毒危機嚴重影響了所有地區的教育部門。全面和部分學校關閉對兒童的學習和福祉造成了毀滅性的後果。全球大多數男女學童都依賴學校作為與同伴互動、尋求支持、獲得健康和免疫儲備接種服務以及營養膳食的場所。學校關閉的時間越長，兒童與童年這些關鍵元素的隔絕時間就越長。

The most vulnerable children and those unable to access remote learning are at an increased risk of never returning to the classroom, and even being forced into child marriage or child labor.

最脆弱的兒童和那些無法進行遠程學習的兒童面臨著永遠無法重返課堂的更大風險，甚至被迫面臨童婚或童工。

Except east Asia, which commenced school closure in January–February 2020, by the end of March school closure affected the normal academic routine of 1.5 billion learners (84% worldwide total) across 169 countries of the world.

除東亞於2020年1月至2月開始關閉學校外，到3月底，關閉學校影響了全球169個國家的 15 億學習者（佔全球總數的84%）的正常學術常規。

Reopen / Lift Lockdown / 重新開放 / 解除封鎖

Countries worldwide are starting to lift restrictions that were first imposed in 2020 to slow the spread of COVID-19 — including rules that governed travel, socializing, mask wearing and self-isolation. For example, all legal restrictions related to COVID-19, including required masking in public and self-isolation following a positive test, are being scrapped in the United Kingdom. Poland, Slovakia and Iceland have removed the requirement to wear masks outdoors in public and relaxed rules on gatherings, including reopening nightclubs and lifting capacity limits.

全球各國開始解除2020年為減緩疫情傳播而實施的限制措施——包括限制旅行、社交、佩戴口罩和自我隔離的規定。例如，在英國，所有與 COVID-19 相關的法律限制，包括在公共場所強制佩戴口罩和檢測陽性後的自我隔離，都已被取消。波蘭、斯洛伐克和冰島取消了在公共戶外場所佩戴口罩的要求，並放寬了關於聚會的規定，包括重新開放夜總會和取消容納量限制。

Vaccine / 疫苗

There are several COVID-19 vaccines validated for use by WHO, including the AstraZeneca, the Pfizer-BioNTech (BNT), the Moderna, and so on. According to WHO, vaccines are a critical tool in the battle against COVID-19, and getting vaccinated is one of the best ways to protect yourself and others from COVID-19. Vaccines train our immune system to recognize the target virus and create antibodies to fight off the disease without getting the disease itself. After vaccination, the body is ready to fight the virus if it is later exposed to it, thereby preventing illness.

世界衛生組織 (WHO) 已經驗證了幾種可用於臨床的 COVID-19 疫苗，包括阿斯特捷利康 (AstraZeneca，即AZ疫苗)、輝瑞-BioNTech (BNT疫苗)、莫德納 (Moderna) 等等。世界衛生組織表示，疫苗是抗擊 COVID-19 戰役中的關鍵工具，接種疫苗是保護自己和他人免受 COVID-19 侵害的最佳方法之一。疫苗訓練我們的免疫系統識別目標病毒並產生抗體來對抗疾病，而不會讓我們自己感染疾病。接種疫苗後，如果身體日後接觸到病毒，就已經做好了對抗病毒的準備，從而預防疾病。

Situation and Vaccination in Taiwan / 台灣疫情與疫苗接種情況

According to statistics from Taiwan Centers for Disease Control, as of 27 December 2022, there are a total of 8,738,114 confirmed cases of COVID-19 and 15,120 deaths in Taiwan. On 19 March 2021, the Central Epidemic Command Center (CECC) in Taiwan announced that vaccinations would start on 22 March. In addition, CECC announced vaccination plan listing prioritization, which included 10 prioritized groups, such as health workers, other frontline workers and seniors were the first to be inoculated with the vaccine. After inoculation, individuals receive an official yellow card that records individuals' vaccination information. On 6 July, CECC announced the creation of Taiwan Domestic COVID-19 Vaccination Appointment Platform, allowing the digitalization of COVID-19 vaccination sign up and appointments. As of 27 October 2022, 65,115,783 doses were administered, and 94% of the Taiwan population has received at least one dose, and the second dose coverage reaches to 88.8%.

根據台灣衛生福利部疾病管制署的統計，截至2022年12月27日，台灣累計確診病例 8,738,114 例，死亡 15,120 例。2021年3月19日，台灣中央流行疫情指揮中心 (CECC) 宣佈疫苗接種將於3月22日開始。此外，指揮中心宣佈了疫苗接種優先順序計劃，其中包括 10 個優先群體，例如醫事人員、其他第一線工作人員和老年人是第一批接種疫苗的人。接種疫苗後，個人會收到一張記錄個人接種信息的官方黃色卡片 (即黃卡)。7月6日，指揮中心宣佈建立台灣本地 COVID-19 疫苗接種預約平台，實現疫苗接種登記和預約的數位化。截至2022年10月27日，已累計接種 65,115,783 劑，已有 94% 的台灣人口接種了至少一劑疫苗，第二劑覆蓋率達到 88.8%。

Extended Content / 延伸內容

In order to disseminate information about COVID-19 prevention, CECC made short videos in various languages, including English, Thai, Vietnamese, Indonesian, Filipino, etc., ensuring no one was left behind.

為了傳播有關 COVID-19 預防的信息，中央流行疫情指揮中心製作了多種語言的短片，包括英語、泰語、越南語、印尼語、菲律賓語等，以確保不遺漏任何人。

Video Transcript: 5 Tips to Prevent Epidemics / 影片逐字稿：日常防疫五大貼士

Hello! I'm Dr. Felice O'Donnell. COVID prevention is part of our daily lives. In this video, let's review together, five tips to prevent COVID.

你好！我是費莉絲·歐唐納 (Felice

O'Donnell) 博士。預防新冠病毒是我們日常生活的一部分。在這段影片中，讓我們一起複習預防新冠病毒的五個貼士。

1. Take your temperature daily; see a doctor if necessary.

1. 每天測量體溫；如有必要請就醫。

2. Wear a mask; change it when necessary.

2. 戴口罩；必要時更換。

3. Wash your hands often; avoid touching your face.

3. 勤洗手；避免觸摸臉部。

4. Maintain social distance to prevent transmission.

4. 保持社交距離以防止傳播。

5. Disinfect your environment; maintain good ventilation.

5. 對環境進行消毒；保持良好的通風。

The five prevention tips can help detect symptoms early and reduce the risk of transmission. To prevent COVID, everyone is important. Let's all do our part to protect each other's health.

這五個預防貼士可以幫助及早發現症狀並減少傳播風險。為了預防新冠病毒，每個人都很重要。讓我們都盡自己的一份力量來保護彼此的健康。
